

Professional Summary

Senior SDET with 3+ years of experience in **manual and automation testing** of enterprise web applications. Currently testing Keychain's AI-powered CPG manufacturing platform; previously worked on an Aflac insurance product. Skilled in BDD (Gherkin), Selenium WebDriver frameworks with Java, TestNG, Maven and POM, API automation with Rest Assured and Postman, SQL validation, and CI/CD with Jenkins and Git. Uses **Claude** and **GitHub Copilot (AI)** to speed up test design and automation. **LOMA-281 certified**, with Agile/Scrum experience.

Skills

- **Programming Languages** – Java, SQL
- **Testing Skills** – Test Automation, API Automation, Regression Automation, Test Strategy & Planning, Requirement Analysis, Test Case Design, Functional & End-to-End Testing, System & Integration Testing, Smoke & Sanity Testing, UAT, Cross Browser Testing, Mobile Testing (Android & iOS), Performance Testing, SQL/Backend Validation, Defect Triage & Root Cause Analysis.
- **Tools and Technologies** – **Automation:** Selenium WebDriver, TestNG, Maven, Rest Assured, Apache POI | **API & Performance:** Postman, JMeter | **CI/CD & Version Control:** Jenkins, Git, GitHub | **Test Management:** Jira, Linear, Zephyr Scale | **Database:** MySQL | **AI:** Claude, GitHub Copilot
- **Frameworks and Methodologies** – Page Object Model (POM), Data-Driven Framework, Hybrid Framework, BDD (Gherkin), SDLC, STLC, Agile Scrum, CI/CD, OOPs Concepts.
- **Soft Skills** – Analytical Thinking, Problem Solving, Strong Communication, Team Collaboration, Stakeholder Management, Attention to Detail, Time Management, Adaptability, Continuous Learning.

Experience

Senior SDET | Recrosoft | Project: Keychain | August 2026 – Present

- Own end-to-end QA for new features on Keychain, an AI-powered CPG manufacturing platform. I work from the **PRD** and the **frontend/backend Git branches**, create **test plans** and **Gherkin scenarios**, and test manually on **Staging**.
- Automate validated scenarios with **Selenium WebDriver** (Java, TestNG, Maven, POM), and automate backend API scenarios with **Rest Assured**.
- Classify test cases as **unit, integration and E2E**, and close **coverage gaps** in existing features with new test cases.
- Run **regression on UAT twice a week** across Staging, UAT and Production.
- Log and track defects in **Linear**, working with developers on fixes and verifying them before release.
- Use **Claude skills** to speed up test design and automation, and work with the **client daily** on requirements, test status and release readiness.

SDET | Coforge | Project: Aflac | June 2023 – March 2026 | 3 Years

- Analyzed **BRDs, FRDs** and **user stories** to design **test scenarios and test cases**, and identified **automation candidates** based on stability, business criticality and regression frequency.
- Executed **Functional, Regression, Smoke, Sanity, Integration, E2E** and **UAT** testing for enterprise insurance applications, including **pre-release regression** and **post-release validation**.
- Built and maintained **Selenium WebDriver** automation with **Java, TestNG, Maven, POM** and a **Data-Driven Framework**, using **GitHub Copilot (AI)** to speed up scripting, cutting **manual regression effort**.
- Performed **API testing** in **Postman** (auth, CRUD, negative scenarios) and **backend validation** with **SQL**, including **data migration testing** from Genelco to Wynsure.
- Tested **mobile apps on Android and iOS** for workflows, UI behavior and stability.
- Managed the full **defect lifecycle** in **Jira** and worked in **Agile Scrum** teams with developers, BAs and product owners.

Projects

UI Automation Framework | E-Commerce Website | Selenium, Java, TestNG

- Built a **Page Object Model** framework with explicit **waits** for synchronization and **TestNG assertions** for validation.
- Implemented **data-driven testing** from CSV files, using **TestNG annotations** to manage test setup and execution.

Booking API Testing | Postman, Rest Assured, JMeter

- Automated **CRUD and authentication** flows in **Postman** and **Rest Assured**, using environment variables for dynamic data (token, booking_id).
- Validated **status codes, response payloads** and **negative scenarios**.
- Ran **load tests** in **JMeter** with thread groups, **parameterization** and **correlation**, analyzing response time and throughput.

Achievements

- Designed and executed **500+ manual test cases** across Aflac and Keychain releases, and **automated key regression scenarios** with **Selenium WebDriver, Java and TestNG**.
- Cut **manual regression effort** by building reusable **POM** and **data-driven** automation, and kept **twice-weekly UAT regression** at Keychain stable and on schedule.
- Strengthened backend coverage with **API automation in Rest Assured and Postman**, **SQL data validation** and **data migration testing** (Genelco → Wynsure).
- Applied **BDD (Gherkin)** scenarios and **unit/integration/E2E classification** at Keychain, closing **coverage gaps** in existing features.
- Caught **high-impact defects before production** across web, mobile (**Android & iOS**) and API layers, tracked through **Jira** and **Linear**.
- Accelerated test design and scripting with **Claude** and **GitHub Copilot (AI)**, while collaborating daily with **clients, developers, BAs and product owners** in **Agile Scrum**.

Certifications & Training

- **LOMA 281** – Meeting Customer Needs with Insurance and Annuities (3rd Ed.) | LOMA | March 2025 | [View Certificate](#)
- **The Complete Software Testing Bootcamp** | Udemy (Tarek Roshdy)
- **Selenium WebDriver with Java – Basics to Advanced + Frameworks** | Udemy (Rahul Shetty)

Education

- **B.Tech in Computer Science & Engineering** | SRMS CET, Bareilly | 2019 – 2023
- **Class XII (PCM)** | St. Anthony's School, Moradabad | 2018
- **Class X** | St. Anthony's School, Moradabad | 2015
